How many 150 watt solar panels do I Need?

The number of 150 watt solar panels you'll need for your purpose will depend upon how much power you want to draw from them. When the environment is most suitable, the 150 watt solar panel can give 7-7.5 amperes of current and 18-20 volts.

How does a 150 watt solar panel work?

A 150 watt solar panel works by setting electrons free from its cell when the sunlight strikes the solar panel. The electrons become free to move and under certain conditions of the panel, they start moving in the same direction. The flow of electrons in a particular direction generates current, particularly direct current.
