

How much does a 5 kW solar system cost in California?

While a 5 kW system will only cost you \$11,435 in California, doubling the system size effectively doubles the price, so you'll pay about twice that for a 10 kW system. The higher the price tag, though, the more you'll get back as a credit towards your federal tax bill.

Are solar panels worth it in California?

Solar panels are worth it in most areas, including California. Certain factors, including the cost of electricity, incentives, climate, and the angle at which the sun hits your roof impact how quickly you break even on your investment relative to other areas around the U.S.

Does solar cost a lot in California?

Solar is a major purchase, but you can get the price tag to come down a bit by being an educated shopper. Taking advantage of incentives and rebates and shopping around for quotes can bring down your cost of solar in California. As long as your federal tax bill is high enough, you can take advantage of the federal tax credit in California.
