

What is the best plan for solar & battery owners?

The best plan for solar +battery owners is often a time-of-use tariff with lower off-peak and shoulder rates. The expensive peak rates on these plans can be mostly avoided if you have enough solar and storage. Virtual Power Plants are another option for battery owners. Compare VPPs [here](#).

What is the best electricity plan for solar owners?

As mentioned above, the best electricity plan for solar owners is one offering good balance of feed-in tariff, consumption and supply rates. Some of the issues to watch for in the fine print of electricity plans for solar owners in particular include: Solar power system capacity limits.

How do I choose a solar energy plan?

If you have solar panels with battery storage: You'll probably want a solar energy plan with a reasonable FiT and competitive energy rates. In this instance, your energy plan should be price-effective for when your storage system runs dry, or runs in excess of what it can handle.

What are the different types of electricity plans with solar?

When it comes to electricity plans with solar, households typically have the choice from one of two options - a standard electricity plan with a feed-in tariff (FiT) or a marketed, solar-specific electricity plan.

Do you need a solar energy plan?

If you can rely on your solar panels for the whole day: You want a solar energy plan with a good electricity usage and supply rate. This is because you'll still be relying on the grid for electricity in the evenings when your solar panels are inactive.

How do I choose the best way to use solar electricity?

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.
