

What is the solar tax credit?

The solar tax credit is a federal incentive available to all US taxpayers who install solar panels and/or batteries on their homes. Although it's not California-specific, it's one of the best solar incentives available to California residents in 2025. The tax credit has been around for years but was expanded by the Inflation Reduction Act in 2022.

What are California solar tax incentives?

The following California solar incentives come in the form of tax credits, exemptions, and exclusions. Consult a licensed tax professional for advice regarding tax incentives. The first tax incentive to mention is the 30% federal solar tax credit - also known as the ITC or Residential Clean Energy Credit.

How much does a solar battery cost in California?

The cost to add an average home solar battery is \$15,600 before incentives, and about \$8,895 after the tax credit and the California battery rebates. A solar battery is necessary to get the most value from a solar installation in California.

Is there a solar battery incentive program in California?

There is one major solar battery incentive in California, the Self Generation Incentive Program (SGIP), which provides rebates to people who install home batteries.
