

Does California have a solar mandate for new commercial construction?

By now most California builders know about the solar mandate for new commercial construction that the California Energy Commission (CEC) implemented in 2019, but few are aware that the latest changes to the Building Energy Efficiency Standards (Title 24) include battery storage system requirements, effective January 1, 2023.

How much does a solar battery cost in California?

The average cost for a 6-kW solar installation with a battery is \$33,600 before incentives and about \$22,100 after the tax credit and the California battery rebate. A solar battery is necessary to get the most value from a solar installation in California.

Do I need a solar battery in California?

A solar battery is necessary to get the most value from a solar installation in California. Our solar calculator will show you your estimated solar panel costs and the value of any solar incentives and rebates you are eligible for.

Is investing in commercial solar a good decision?

Commercial solar is a good investment for businesses, typically offering a return on investment (ROI) in about three years due to major tax credits and significant savings on electricity bills. Currently, these savings can be as much as 80%. However, with changes coming to California, these numbers might not be around for much longer. Get a quote for Energy Storage.
