

# Government subsidy for container solar power system in Saudi Arabia

How much solar energy will Saudi Arabia have in 2032?

It was projected to be composed of 25 GW of solar thermal, and 16 GW of photovoltaics. At the time of this announcement, Saudi Arabia had only 0.003 gigawatts of installed solar energy capacity. A total of 54 GW was expected by 2032, and 24 GW was expected in 2020, which was never reached.

Why do Saudi companies use solar power?

Saudi companies that are part of multinational groups such as Ikea and GSK have deployed solar power at the encouragement of their parent companies, which have sustainability goals. Meeting such expectations has also been a factor for other Saudi groups, including logistics and transport businesses, that have links to western markets.

Is solar phasing out energy subsidies?

But experts say the critical factor driving recent solar take-up may be the phasing out of energy subsidies that began in 2018 as part of wider economic reforms, which included the rollout of large-scale renewable projects. "We invested in solar and actually it's paying back," said Mazen Fakeeh, president of Fakeeh Care Group.

Can Chinese investments help reduce solar costs in Saudi Arabia?

Chinese investments have played a key role in lowering solar costs. Roughly one-third of \$21.6 billion in greenfield FDI from China into Saudi Arabia since 2021 has gone to clean technologies, including solar components. But the biggest shift has come from within.

How much solar power does Saudi Arabia have?

This compares to a global solar power installation of 100 GW in 2017 and a total installed capacity of 77 GW in Saudi Arabia in 2016. This project was cancelled in September 2018.

Saudi Arabia is a world leader when it comes to extracting energy sources from the ground, but it is the Kingdom's drive to harness a power supply in the sky that is attracting attention. Favorable government policies, a shift to ...
