

# Government subsidy for customized portable solar solution in Finland

Why is Finland halting subsidies for solar projects?

The electricity market in Finland remains volatile, making long-term forecasting and planning challenging. While Finland has made commendable progress in solar development, the government has recently decided to halt subsidies for solar projects. Backing will instead be allocated to hydrogen projects.

What is Finland doing with solar technology?

Finland has made impressive strides in solar technology. For example, Solnet Group has invested heavily in research and development, leading to energy storage possibilities and grid optimization. These advancements are critical for optimizing grid operation and stabilizing energy consumption.

Is Finland a good country to invest in solar?

The government moved quickly to introduce policies and incentives to promote renewable energy, including tax benefits and subsidies for solar installations. Even with solar on the rise, however, there is still potential for more and Finland is not among the countries deploying solar the most, at least not yet.

Can solar power improve grid stability in Finland?

Solar power can enhance grid stability in Finland by providing a decentralized energy source and this can be especially beneficial during extreme weather conditions or unforeseen disruptions. Developers vs. landowners

Do you get a tax subsidy if you invest in solar?

Companies and municipalities receive subsidies of 24 to 40 percent if they invest in photovoltaics. However, this subsidy does not apply to residential buildings and building societies. But the installation of solar systems on private homes is subject to tax advantages of up to 10 percent of the total investment.

Is solar irradiation a good idea in Finland?

The annual solar irradiation at least in southern Finland is comparable to Central Europe. The cold weather and the dust-free environment is an advantage, Auvinen points out. This is also confirmed by Matthi Lehtonen, operator of an outdoor tracker array (6.2 kilowatts) on a farm in the Helsinki metropolitan area.
