

How much does it cost to install a solar battery?

Most batteries, like Tesla Powerwall and Sungrow, offer solar battery blackout protection, powering essentials (fridges, lights) for 12-24 hours with a 10 kWh battery. Setup costs \$1,500-\$3,500 extra for emergency circuits. Not all batteries support backup, so confirm with installers. Larger batteries (10+kWh) ensure longer outage coverage.

How much does a solar battery cost in Australia?

Let's break down the real costs, the influencing factors, rebates, and whether investing in battery storage is a smart move today. The average solar battery price (installed) in Australia in 2025 is sitting between \$800 and \$1,200 per kWh. That means for a standard 10kWh system, you'll typically pay between \$8,000 and \$12,000 installed.

How much does a 10 kWh solar battery cost in Australia?

The average price for a 10 kWh solar battery ranges between \$8,000 - \$10,000. While the uptake of solar panels in Australia is really strong, the same cannot be said for solar batteries. A newer technology, battery storage has been viewed as expensive - especially when comparing the payback of a battery system against its expected life.

Why is the solar battery price falling in Australia?

Thanks to many innovators (some who've now got their sights set on Mars), the solar battery price in Australia has plummeted. Supply chain issues due to COVID have definitely curbed that trend recently, but as the world emerges from lockdowns, the solar battery price has started to decline once again.

Are batteries worth it in Australia?

We've been tracking the financial return of batteries in Australia for over a decade and regularly update our analysis of whether batteries are worth it. At the midway point of 2025 was a key turning point in this equation as the federal battery rebate was introduced which offers a discount of around 30% for a typical 10kWh battery.
