

Payback period of solar panel storage box in

How long is a solar panel payback period?

The solar panel payback period typically ranges from six to 10 years, varying based on system size, location and incentives. Federal and local rebates, including a 30% federal tax credit, significantly lower initial solar installation costs.

How long does it take for solar panels to pay back?

So, if it takes 10 years to recover the cost of your solar panels, you can still expect savings on your electric bills for another 15 years, which is an excellent investment. Solar companies can provide you with an estimate of your payback period.

How long do solar panels last on EnergySage?

That's the average payback period on EnergySage. At the end of those 7.1 years, your solar panels will have saved you enough money on your electric bill to cover the upfront cost of your system. Year eight in the example is when you technically start saving money, having finally broken even on your investment.

How do you calculate solar payback?

Determine Your Solar Payback Period Divide the net cost of your solar system (after subtracting incentives) by your annual electricity bill savings. This calculation will give you the estimated time for your solar investment to pay for itself, known as the payback period or break-even point.

How long does it take a solar system to pay off?

The average solar payback period for EnergySage customers is currently just over seven years. However, without the federal tax credit, that same system would take over 10 years to pay for itself. Here's what you need to know about how long it's likely to take you to break even on your solar energy investment--and why timing matters.

How does electricity affect solar payback?

The amount of electricity your household uses monthly, as well as the cost of electricity in your area significantly influences your solar payback period. The higher your electric bill, the greater the savings and the faster you'll reach your payback period.
