

Are solar batteries a good investment in Scotland?

Your home battery storage system manages your energy requirements and makes it easier to make money from any excess energy that your panels generate. Therefore, installing solar batteries in Scotland could be a lucrative investment for your future.

Why do solar panels need a battery in Scotland?

The weather in Scotland makes your solar panels less efficient, it's not unusual to have overcast weather for days on end. Therefore, it's wise to supplement your PV system with a solar battery or multiple batteries depending on the size of your array.

Do solar panels work in Scotland?

This means your home will reap the full benefits of every bit of energy produced by your solar panels as they charge your solar battery system which successfully stores it. The weather in Scotland makes your solar panels less efficient, it's not unusual to have overcast weather for days on end.

Should you install a solar system in Scotland?

By installing a PV system and solar batteries in Scotland, you reduce your carbon footprint significantly. You can even make some money by selling your excess power back to the energy grid at the prevailing rate. You will not have to worry about price increases; in fact, you may even anticipate them because they will improve your profit margin.

What are solar batteries & how do I use them?

Solar batteries make your solar PV panels much more efficient, enabling you to harness this energy when you need it. We are Fully Accredited Solar Photovoltaic G98-1 & G99-1 Installers specialising in the installation of all Solar PV systems and Solar Battery Storage products.

How many solar batteries can a family use in Scotland?

A family of four or five in Scotland probably could use at least two batteries. That way, there is a backup if one unit fails. When selecting your system, inquire whether you can add extra units should the need arise. Our team recommends installing solar batteries simultaneously as you do your system.
