

Do solar batteries qualify for a tax credit?

A vast majority of batteries installed between 2022 and 2032 will qualify for the solar tax credit expanded by the Inflation Reduction Act. The only qualifications specified by the Inflation Reduction Act are that the battery must be installed in a taxpayer's residence in the US, and the capacity of the battery storage must exceed 3 kWh.

Can you get a tax credit for a battery storage system?

In addition to the federal tax credit, several states have taken steps to help homeowners get battery storage systems with their solar installations. These incentives can be combined with the federal tax credit to reduce the total cost to own a battery down to a very manageable number.

Can You claim a solar energy credit if you add battery storage?

Although the IRS and Department of Energy have yet to issue guidance on the matter, it appears homeowners will be able to claim the Residential Clean Energy Credit for adding battery storage added to existing solar systems.

Does battery storage qualify for IRA tax credit?

Yes, standalone battery storage now qualifies for the 30% Residential Clean Energy Credit, introduced in 2023 under the IRA. This significant change means homeowners can receive a 30% tax credit for the installation of battery storage systems, even if they are not paired with new solar panels.

How much does a battery tax credit cover?

The tax credit covers 30% of the cost of your storage system, up to \$5,000 for residential batteries and up to \$150,000 for commercial batteries. But act fast—this incentive is currently only authorized through the 2022 tax year and there's a cap on the level of funding available each year.

Do solar panels get a tax credit?

The 30% tax credit applies to any solar panel installation after January 1, 2022, so if you already installed your solar panels, you'll get back more than you thought! In addition to applying to solar panels, you can get the same credit for a battery storage system.
