

Why is my solar charge controller blinking green?

If the solar charge controller is blinking green, then it means that the solar battery is complete, and charging will be stopped--your solar charge controller blinking red means there is a fault with your controller. The issue might result from arc fault or ground fault. You can contact your solar charge controller to find out why it keeps blinking.

What does light blinking mean on a solar charge controller?

Load Icon: This is the load you put on your PV system. This icon lets you know if it's big, small, or perfect. Depending on the Charge Controller, Light Blinking here means Overloading and Short-circuit. All of these may vary depending on the type of Solar Charge Controller you have. The key point here is the basic introduction.

Why is my solar panel icon flashing?

The classic issue. Wrong wiring is the single most common issue of many problems related to Solar Panels. First of all, if your panel is properly wired the charge controller would detect stable power input from the Solar Panel. The panel icon should stay stable. If it's unstable, this icon will flash to warn you.

How do I know if my solar charge controller is working?

Solar Charge Controller icon and lights Blinks or Flash to indicate the operating status of the solar system components connected to the solar controller. These are the most common lights that you will see on your solar charge controller, whether it is an MPPT solar controller or an economic PWM controller.

Why is my solar charge controller not working?

Use a voltmeter to check if any charge is available in your battery. If the battery is faulty, it would be best to replace it with a working solar battery. Sometimes your solar charge controller is not working because it is low quality. The low-quality charge controller will jam when a lot of energy is being sent through it.

Why is my battery icon flashing fast?

Depending on your Charge Controller, the Battery Icon flashing fast usually means your battery is fully charged. The opposite slow flashing means your battery is losing power. Load Icon: This is the load you put on your PV system. This icon lets you know if it's big, small, or perfect.
