

What battery does the Thelema solo take?

The Thelema Solo takes a single 21700 or 18650 battery and can output up to 100W. The kit comes with the UB Pro Pod tank which is the same tank that is included with the Thelema Quest kit. This device was sent to me by Lost Vape for the purpose of this review.

How do the battery door latches on a Thelema solo 100W?

On the Thelema Solo 100w mod the battery door latches on by 2 magnets. The magnets are placed at the back of the door (where it bends), there is one at the top and one at the bottom. Despite the magnets being pretty small, they do hold really well. On the edge, at either side of the 'door', is a tongue and groove system with a sloped edge.

Where are the battery polarities on a Thelema solo mod?

The polarities for the battery are marked on the inside of the mod the same colour as the backing I maybe would have preferred these to be in white or a brighter colour to make it easier to see. Moving onto the front of the thelema solo mod you have the usual lost vape screen and buttons.

What is the Thelema solo 100W kit?

I'm not quite sure what that means... however, I do know the Thelema Solo 100W kit is a C Frame mod that takes an external 21700 battery. I like that, in fact it's the first thing I noticed. The Thelema Solo kit has 5 power modes: Wattage (upto 100w), VPC (Variable power curve), Bypass. Voltage and Temperature Control (SS904, SS316, Ti & Ni).

What is the Thelema solo starter kit?

Constructed from luxurious zinc-alloy, the chassis of the Thelema Solo Starter Kit protects the internal Quest 2.0 Chipset. Powered by a single high-amp battery, the Thelema Solo can utilize either a single 2X700 or 18650 battery within an adapter sleeve.

Does Thelema solo come with UB pro pod tank?

Check out the Lost Vape Thelema SOLO 100W Starter Kit, featuring a 5-100W output range, temperature control suite, and is paired with the UB Pro Pod Tank. Batteries sold separately.
